Occupational Therapist Case Management and Service Navigation Support

Aurora-Newmarket

Family Health Team

As part of our Occupational Therapist (OT) role, case management and service navigation support is provided to patients to ensure a continuum of care from hospital to community. Follow up post discharge is essential and during the time of the COVID-19 pandemic, it is a potential area of system breakdown between hospital to home. Our OT works closely with patient's primary care provider, local hospital and local resources to ensure each patient has all needs met and follows up is planned post discharge.
