BCFHT - Virtual Pulmonary Rehab "COVID Style"**

Pulmonary Rehab is proven to greatly improve the quality of life, reduce hospitalizations and exacerbation's in our patients who experience chronic lung conditions. With the onset of COVID 19, both our core and maintenance programs for Pulmonary Rehab were temporarily forced to be placed on hold, putting this vulnerable population of patients at risk. Recognizing that COVID 19 would likely impact the delivery of group sessions for the foreseeable future, the BCFHT lung health team ventured to produce a virtual model to ensure continuity of care for this population.
