

# Heart Harmony: Revolutionizing Heart Failure Through Innovative Team-Based Approach in Huron Perth & Area Ontario Health Team

An integrated population health approach seamlessly connects primary care with specialist services in a Spoke-Hub-Node model of care.

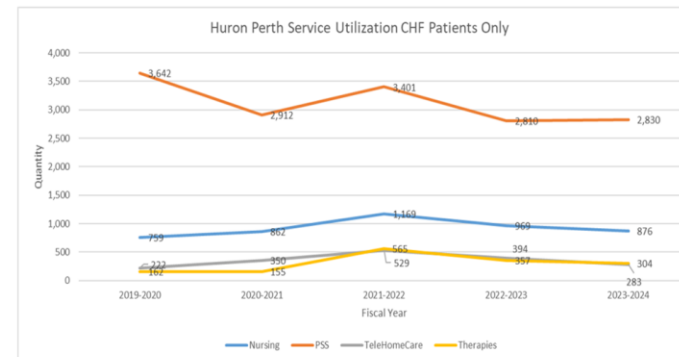

Nurse Practitioners (NPs) gain valuable insights from Internal Medicine specialists, which they apply to enhance goal-directed therapy at the Hub and in their primary care settings. This comprehensive team includes Internal Medicine Specialists, NPs, primary care physicians, Best Care case managers, and allied health professionals, as well as community support services. Together, we're improving outcomes for heart failure patients through integrated, expert-driven care.

These FHTs have dedicated primary care Nurse Practitioners (NPs) who collaborate with Internal Medicine specialists at our Hub. Together, since 2021, NPs have provided comprehensive care for over 370 heart failure patients, demonstrating the power of integrated, specialized primary care.
