# Tracking post-hospital visits in P&P using Day Sheet Reports
*Courtesy of Frank Ruberto, Niagara Medical Group*

Start in the Calendar and select the Reports option. Then select the Day Sheet Generator

For our team we would select Day sheet from the option of reports

From this screen you will select the calendar you want, then the providers that you want. Select the date range and in the purpose field, select the pre-defined purpose you are looking for, such as post-hospital for the 7 day post-hospital visit.

This will bring up the print preview of the day sheets. From there you can just count the number of patients on each sheet and for each provider. This will tell you the number of post hospital visit appointments each provider has had in that time frame.
