

WHAT IS THE PROGRAM PERFORMANCE MEASURES CATALOGUE (PPMC)?

The Program Performance Measures Catalogue (PPMC) is a list of the performance measures (indicators) that teams have used in Schedule A of their Annual Operating Plans. The PPMC can help you find appropriate indicators to [plan and evaluate](#) your team’s programs and services, and to complete Schedule A.

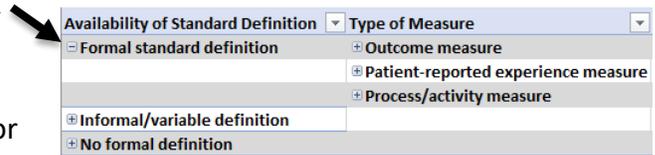

HOW DOES IT WORK?

1. Find **Program Area** at the top left-hand corner, using the drop-down menu select one or more program areas.

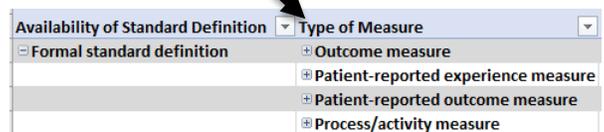

- Once you’ve done this, the list of measures will be limited to those relevant to your program area.

2. Under **Availability of Standard Definition**, click on ‘+’ beside one of the grades (**formal, informal/variable, no definition** or **no formal definition**) to show all the types of measures for the selected program area that have that grade.

- **Formal Standard Definition:** Indicator is present in the [Primary Care Performance Measurement Framework](#) or other guidelines as a measure of this type of program.
- **Informal/Variable Definition:** A slightly different version of the indicator is present, or it is present for a different purpose.
- **No Formal Definition:** The definition is either defined locally, or it is patient-defined.
- **No Definition Found:** A standard definition has not yet been found. If you have found one, [consider sharing it with us](#) so we can add it to the catalogue.

3. Under **Type of Measure**, click on ‘+’ beside one of the grades (**outcome, patient-reported experience, patient-reported outcome** or **process/activity**). This will expand all the measures within the program area.

4. Under **Measure** click on ‘+’ beside one of the indicators, which will expand the **Source of Definition**.

- In the **Source of Definition** field, you will find a link number. You can access the links under the **Hyperlinks** tab in the excel file.

TIPS AND TRICKS:

- 💡 Consider using measures with formal standard definitions.
- 💡 The **# of Times Measure Used** is the total number of times any team reported using that measure for a program or service. Being frequently used does not imply that a measure is appropriate. It may simply mean that it is easy to use.
